DT4x+/DT43+ FCC COMPLIANCE STATEMENT FOR AMERICAN USERS

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

TO WHICH THIS DECLARATION RELATES IS IN CONFORMITY WITH THE FOLLOWING STANDARDS IEC 62368-1:2018

EN 55032:2015+A1:2020, Class B EN IEC 61000-3-2:2019+A1:2021 EN 61000-3-3:2013+A2:2021+AC:2022-01 EN 55035:2017+A11:2020, (IEC 61000-4-2 Edition 2.0 2008-12, IEC 61000-4-3 Edition 3.2 2010-04, IEC 61000-4-4 Edition 3.0 2012-04, IEC 61000-4-5 Ediotion 3.1 2017-08, IEC 61000-4-6 Edition 4.0 2013-10, IEC 61000-4-8 Edition 2.0 2009-09, IEC 61000-4-11 Edition 3.0 2020-01) AS/NZS CISPR 32:2015 AMD 1:2020, Class B

FCC Part 15 Subpart B ANSI C63.4-2014

Safety instructions

Please read the following instructions carefully.

- 1. Keep the equipment away from humidity.
- 2. Before you connect the equipment to the power outlet, please check the voltage of the power source.
- 3. Make sure the printer is off before plugging the power connector into the power jack.
- 4. It is recommended that you connect the printer to a surge protector to prevent possible transient overvoltage damage.
- 5. Be careful not to get liquid on the equipment to avoid electrical shock.
- 6. For safety and warranty reasons, ONLY qualified service personnel should open the equipment.
- 7. Do not repair or adjust energized equipment under any circumstances.

*This device is not suitable for the areas where children may appear

Hot parts! Burned fingers when handling the parts Wait one-half hour after switching off before handling parts.

The blade is sharp, please do not touch.

Do not remove the ground pin of power cord. Grounding is an important safety feature. Please keep the power cord grounded all the time

CAUTION

Danger of explosion if battery is incorrectly replaced Replace only with the equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

Only use with power supply adapter model: WDS060240P (9A).

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Specifications are subject to change without notice.

2-1. Loading the label roll

Z - 1	Loading the labe	
1.	Place the printer on a flat surface and open the printer cover.	
2.	Release the label supply hub.	
3.	Lift the label roll holder and pull it out as far as possible. Install the label roll on	
7.	the label supply hub.	
5.	Now press the label roll holder down until it clicks into place.	
6.	Return the label roll holder to its original position.	

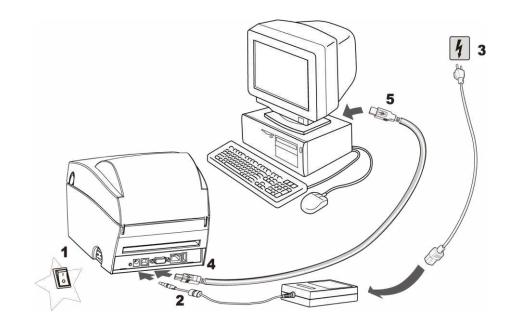

7.	Pass the label under the paper guides and pull it forward.	
8.	Adjust the paper guides to the width of the label liner.	
9.	Close the printer cover to finish loading the labels.	

2-2. Installing the label roll holder

2-3. Connecting the printer to the host computer

- 1. Please make sure that the printer is switched off.
- 2. Connect the power cord to the power supply and to the AC adapter, then connect the adapter to the printer.
- 3. Connect the printer with the host computer via the USB port or serial port.
- 4. Switch on the printer. The LED indicator should light up.

2-4. Installing the driver

	risidining the driver

3. Operator panel

3-1. FEED button

When you press the FEED button, the printer moves the label to the defined stop position. If you are using continuous labels, pressing the FEED button will move label stock until you release the button again. If you are using individual labels, pressing the FEED button will move only one label. If the label does not stop at the correct position, you need to run the auto-detection function on the label stock (see Section 3-3).

3-2. LED status

Press the FEED button and keep it pressed, then switch on the printer. You will hear two beeps and the LED lights up red. Release the FEED button. The printer will now automatically measure the label size (see Section 4-3.) and then print a test page (see Section 4-4.)

LED indicator	Status	Description
Green	Standby mode	The printer is ready for operation.
Red (flashing)	Error mode	The printer has detected an error. (see Section 3-5. Error alerts)

3-3. Label size calibration

The printer can automatically detect and store label height. That means the host computer does not need to transmit the label height to the printer.

- 1. Check that the label sensor is positioned correctly.
- 2. Check that the label stock is loaded correctly.
- 3. Switch off the printer.
- 4. Switch on the printer, keeping the FEED button pressed. When the LED starts to flash red, release the FEED button. The printer will now measure the label stock and store the label height.
- 5. Once the printer has successfully measured the label stock, it will print a self-test label.

3-4. Self test

The self-test function helps you find out whether the printer is functioning normally. The printer prints the following test page:

Model & F/W Version	— DT4x+: GX.XXX
USB ID setting	
Serial port setting	Serial port:96,N,8,1

[Note]

For more information about advance settings, such as "Sensor switch" or "Dump Mode", please refer to Programmer's manual.

3-5. Error alerts

LED indicator	Beeps	Description	Solution
Red (flashing)	None	High temperature at the print head.	Once the print head has cooled down, the printer switches to standby mode.
Red	2 x 2 beeps	No paper is detected.	Make sure that the label sensor is positioned correctly. If the sensor still does not detect the paper, run the auto-detection function again.
		The paper is finished.	Replace the label roll.
Red	2 x 2 beeps	Paper feed problem.	Possible reasons: the print medium has become trapped around the rubber roll; the sensor cannot detect a gap or black mark between the labels; there is no paper. Please reset the sensor.
Red	2 x 2 beeps	The memory is full. The printer prints the message "Memory full".	Delete unnecessary data or install additional memory.
Red	2 x 2 beeps	Unable to find file. The printer prints the message "Filename cannot be found".	Use the "~X4" command to print all files. Then check whether the files exist and whether the names are correct.
Red	2 x 2 beeps	A file of the same name already exists. The printer prints the message "Filename is repeated".	Change the name of the file and try storing it again.

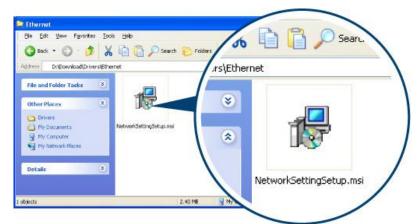

4. NetSetting for Ethernet

4-1. Installing the NetSetting software

The NetSetting software is used to manage the network configurations when connecting the printer via Ethernet port. It is available on product CD or can be downloaded from official website. To install the NetSetting, please follow below steps.

STEP-01 Insert the product CD in the CD/DVD drive of the host computer and open the "Ethernet" folder on the CD.

STEP-02 Select the icon for the NetSetting installation file and click it to start the installation.

STEP-03 Follow the instructions on the screen. The Setup Wizard guides you through the installation procedure.

STEP-04 Specify the "Installation Folder".

🛃 NetSetting	
Select Installation Folder	NetSetting
The installer will install NetSetting to the follow To install in this folder, click "Next". To install I Folder:	ng folder. o a different folder, enter it below or click "Browse".
C.\Program Files\Godex\WetSetting\	Browse
	Disk Cost
Install NetSetting for yourself, or for anyone	who uses this computer:
<u>O E</u> veryone	
⊙ Just <u>m</u> e	
	Cancel < <u>B</u> ack <u>N</u> ext>

STEP-05 Click "Next" to start the installation.

STEP-06 Once the installation is completed; you will see the NetSetting icon on your desktop.

4-2. The interface of NetSetting

Click the NetSetting icon to start the program; you will see the start page as below. The start page will display the basic information of connected printer and your PC.

NetSettir	ng	Language
Search Godex Netv	vork Printer	
🧕 🌮 🔝	5	
/ant To Connect		P

Set	ReGet	

There are six tabs on the top of interface which can configure different types of network settings. But for the data security reason, you need correct password to enter the configuration pages.

[Note]

The default password is "1111", you can change the password later from the "IP Setting" tab.

IP Setting

The IP Setting tab can change the printer name, Port number, Gateway setting and the password for configuring the printer. You can also set the printer's IP address ether by DHCP or by Static IP.

	NetSetting IP Setting	Language +
	🌮 🔝 🍫	
Printer Name: Port No:		Length(1~16)

Password:	0000	Length(1~4)
● Get IP From	DHCP Server	
⊖ Static IP		
	192.168.101.151 I 255.255.255.0 I	
Set	ReGet	

You can press "Set" button to apply the settings and "ReGet" button to refresh the setting values.

[Note]

- 1. To fully benefit from the NetSetting software, you should be familiar with basic networking principles. Please contact your network administrator for related network setting information.
- 2. When enabling DHCP, if you find the IP Address as: IP = 169.254.229.88, Netmask = 255.255.0.0, Gateway = invariable (last value), the IP Address is invalid.

Alert Path Setting

NetSetting will send the alert messages to designated mail account when the error happened on printer. The alert messages are sent by SMTP (Simple Mail Transfer Protocol) or SNMP (Simple Network Management Protocol). You can set or change the configurations of SMTP and SNMP on this "Alert Path Setting" tab.

	NetSetting Alert Path Setting	Language +

	and the second s

 Open the dispenser by folding it out. Load the labels, following the instructions in Section 2-1. 	
 12. Remove the first label and pass the label liner over the roller and the tear- off plate. [Note] The label stock should be at least 25 mm high. [Suggestion] When using the label dispenser, set the stop position to 9 mm (DT2: 8 mm). 	
13. Pass the label liner through the printer and dispenser as shown in the illustration.	
14. Fold up the dispenser cover to close it.	
15. Switch on the printer and press the FEED button to measure the label stock.	

5-2. Installing the cutter

6. Maintenance and adjustment

6-1. Cleaning the print head

Dirt on the print head or ribbon, or glue residue from the label liner may result in inadequate print quality. The printer cover must therefore always be closed. Keeping dirt and dust away from the paper or labels ensures a good print quality and a longer lifespan of the print head. Here is how you clean the print head:

- 1. Switch off the printer.
- 2. Open the printer cover.
- To remove any label residue or other dirt from the print head (see blue arrow), please use a soft lint-free cloth dipped in alcohol.

[Note 1]

The print head should be cleaned once a week.

[Note 2]

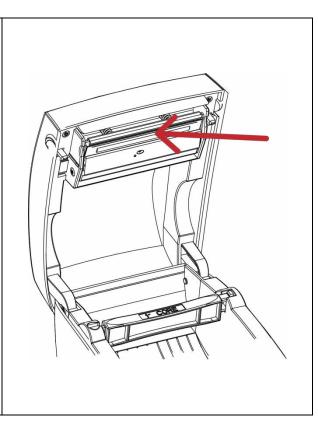

Please make sure that there are no metal fragments or other hard particles on the soft cloth used to clean the print head.

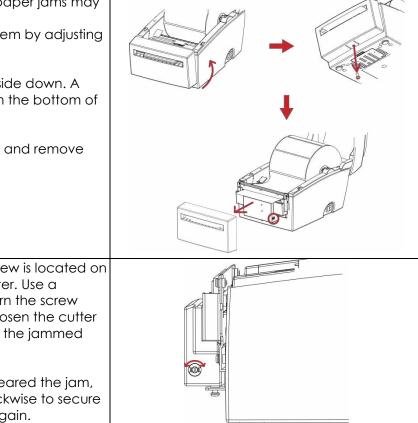

6-2. Adjusting the cutter

While using the cutter, paper jams may occur. You can solve this problem by adjusting

the cutter.

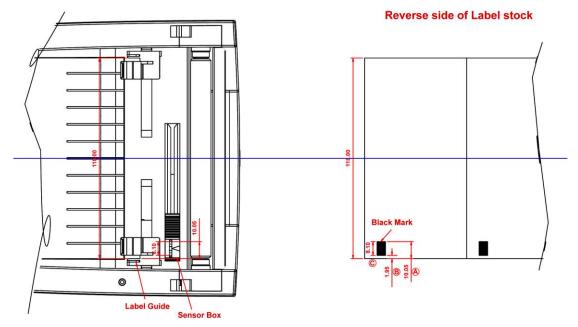

- 1. Turn the printer upside down. A screw is located on the bottom of the cutter housing.
- 2. Unscrew the screw and remove the housing.
- The adjustment screw is located on the side of the cutter. Use a screwdriver and turn the screw anticlockwise to loosen the cutter blade and pull out the jammed label.
- When you have cleared the jam, turn the screw clockwise to secure the cutter blade again.

6-3. Labels with black marks

If you are using black-mark label stock that has the printer's maximum feed width, the printer may not recognise the black marks because they are outside the sensor range. When using label stock with black marks, you should therefore observe the following restrictions:

For 118 mm wide label stock, the black marks should have the following positions and sizes:

- A > 10.05 mm high
- B < 1.95 mm high
- C > 8.1 mm high

6-4. Troubleshooting

6-4. Iroubleshooting Problem	Solution
The printer is switched on but the LEDs	 Check the power supply.
do not light up.	
The LED lights up red (ERROR) and printing is interrupted.	 Check whether is an error in the software settings or the print commands. Replace the print medium with a suitable medium. Check whether there is a label jam. Check whether the label stock is finished. Check whether the print mechanism is closed (the print head is not positioned correctly). Check whether the print medium is covering the sensor. Check whether the cutter is functioning normally and whether it is cutting at all. (Only if a cutter is installed,)
The label stock passes through the printer but no image is printed.	 Please make sure that the label stock is loaded the right way up and that it is suitable material. Choose the correct printer driver. Choose the correct label stock and a suitable printing mode.
The label stock jams during printing.	 Clear the paper jam. Remove any label material left on the thermal print head and clean the print head using a soft lint-free cloth dipped in alcohol.
The label stock does not move correctly and there is no printed image on some parts of the label.	 Check whether any label material is stuck to the thermal print head. Check for errors in the application software. Check whether the starting position has been set incorrectly. Check the power supply.
There is no printed image on part of the label.	 Check the thermal print head for dust or other dirt. Use the internal "~T" command to check whether the thermal print head will carry out a complete print job. Check the quality of the print medium.
The printed image is positioned incorrectly.	 Check whether there is paper or dust covering the sensor. Check whether the label liner is suitable. Please contact your dealer. Check the paper guide settings.
A label is missed out during printing.	 Check the label height setting. Check whether there is dust covering the sensor.
The printed image is blurred.	 Check the darkness setting. Check the thermal print head for glue residue or other dirt.
The cutter does not cut off the labels in a straight line.	 Check whether the label stock is positioned straight.
The cutter does not cut off the labels completely.	 Check whether the label is more than 0.16 mm thick.
When using the cutter, the labels are not fed through or cut off incorrectly.	 Check whether the cutter has been correctly installed. Check whether the paper guides are functioning correctly.
The stripper is not functioning correctly.	 Check whether there is dust on the label dispenser. Check whether the label stock is positioned correctly.

[Note] If any problems occur that are not described here, please contact your dealer.
